Poll: SM coalitions opening questions

Take the survey at <https://forms.gle/qmXcNdhWNN3eNNPC8>

- are coalitions helpful to achieve goals?
- short-term, limited coalitions more likely to achieve goals?
- factor most important in facilitating coalition formation?

- most important benefit for a movement in forming a coalition?
- identity-based movements struggle more to form coalitions?

```

```

- why make coalitions
- types of coalitions
- coalition formation
 - key factors

- intra-/inter-organisational
- examples: Memorial-Sakharov Centre; Raging Grannies
- context (opportunities and threats)

↑

Strongly disagree Disagree Neutral Agree Strongly agree

Why movements make coalitions

- social ties
- institutional structures
- compatible ideologies
- shared threats/opportunities
- other

Coalitions...

- help build/enhance networks
- increase resource availability
 - boost mobilisation potential (again, networks)
- expand tactical repertoires

Types of coalitions

Some coalitions may be enduring; others may be event coalitions

...

Types of coalitions

Some coalitions may be **enduring**; others may be **event coalitions**

Peace protest, Berlin, 2022- 02-27

Coalition formation

Van Dyke and Amos (2017) identify five factors critical to coalition formation:

1. **social ties** - connections between organisations

...

2. **conductive organizational structures** - structures that enable collaboration

...

3. **ideology, culture, and identity** - shared ideas

...

4. **institutional environment** - opportunities and threats

...

5. **resources** - pooling resources or competing

Coalition formation - intra-/inter-organisational factors

- 'exclusive affiliations' orgs. or 'multiple affiliations' orgs.
 - individuals with (other) **social ties**: 'coalition brokers' or 'bridge builders'
- broad/multi-issue organisational goals = **more likely to form coalition** (e.g., Borland 2008)
 - fits with our discussion of framing (e.g., *bridging frames*)
- **strong organisation** (e.g., division of labour, professional leaders) = **more likely to form coalition**
 - e.g., well organised movements can send representatives to others' meetings (Borland 2008)
 - non-hierarchical or loose organisations will struggle (e.g., OWS)
 - fits with discussion of orgs. in social media age (Tufekci 2017)

Coalition formation - intra-/inter-organisational factors

- commonalities and connections between organisations
 - 'plentiful resources and congruent ideologies' (2015)
 - overlapping **collective identities** (e.g., Memorial and Sakharov Centre)
- ideological compatibility (a **necessary** condition?)
 - **splits within movement** (e.g., TERF vs. inclusive feminist groups) by 'minor' differences
 - **others accommodate ...**

Coalition formation - intra-/inter-organisational factors

others accommodate, e.g., Raging Grannies: a rowdy aging women's group in Canada that tempered its strategies to facilitate collaboration with indigenous environmental allies, creating space for indigenous activists at their gatherings, adopting mainstream dress, lending resources to Indigenous protests, and initiating action to ameliorate colonial abuses (Chazan 2016)

Coalition formation - external social and political conditions

- related to opportunity structures
 - opportunities - general or specific openings for mobilisation or movement activism
 - e.g., northern Ireland civil rights groups found international partners in late 1960s partly due to generally high social mobilisation — access to others'/more/shared resources
 - threats:
 - e.g., government repression often drives organisations to collaborate (e.g., For Fair Elections movement in Russia)

Coalition formed amid government repression

For Fair Elections (Russia, 2011-2012) - strange bedfellows

Coalition formation - external social and political conditions

- related to **opportunity structures**
 - *institutional arrangements*:
 - Obach (2010) suggests that U.S. governmental separation of labor and environmental protection into two separate policy arenas inhibits collaboration of labor and environmental groups even when issues are of interest to both.
- **Free space** facilitates the organization of coalitions:

settings within a community or movement that are removed from the direct control of dominant groups, are voluntarily participated in, and generate the cultural challenge that precedes or accompanies political mobilization” (Polletta, 1999: 1).

Coalition formation - summary and ‘potential’

```

table_data <- tribble(
  ~Grouping, ~Factors, ~Details,
  "Intra-org", "exclusive vs. multiple affiliations", "any bridging social ties?",
  "Intra-org", "broad organisational goals", "e.g., bridging frames",
  "Intra-org", "strong organisation", "division (and availability) of labour, professional",

  "Inter-org", "commonalities", "available resources, overlapping collective identities",
  "Inter-org", "ideological compatibility", "factions vs. willingness to accommodate",

  "Opportunity structure", "opportunities", "free space",
  "Opportunity structure", "threats", "",
  "Opportunity structure", "institutional arrangements", ""
)

table_data[2,3] <- cell_spec(table_data[2,3], color="darkred", bold=T)
table_data[6,1] <- cell_spec(table_data[6,1], color="darkred", bold=T)
table_data[6,2] <- cell_spec(table_data[6,2], color="darkred", bold=T)
table_data[7,2] <- cell_spec(table_data[7,2], color="darkred", bold=T)

kable(table_data, "html", escape = FALSE,
      col.names = c("Grouping", "Factors", "")) %>%
  kable_styling(font_size = 25) %>% collapse_rows(columns = 1, valign = "top") %>%
  column_spec(1, width = "3.5cm") %>%
  column_spec(2, width = "9.5cm")
```

Grouping	Factors	
Intra-org	exclusive vs. multiple affiliations	any bridging social ties?
	broad organisational goals	e.g., bridging frames
	strong organisation	division (and availability) of labour, professional leaders, (at least some) hierarchy
Inter-org	commonalities	available resources, overlapping collective identities
	ideological compatibility	factions vs. willingness to accommodate
Opportunity structure	opportunities	free space
	threats	
	institutional arrangements	

...

What's the **coalition potential** of movement cases you know of? Have they formed *enduring and/or event coalitions*?

Risks of coalition formation

- where there is *disparity/imbalance*...
 - **resource-rich** organisations may try to control **resource-poor** partner organisations

Coalitions and movement outcomes (2015)

radical flank effects - dynamics between (relatively) moderate and (relatively) radical parts of a movement and their target(s)

...

- **positive radical flank effect** - activity of radical part of movement compels target/authorities to accept moderate demands
 - e.g., Martin Luther King Jr. and moderate NAACP made more appealing to U.S. (federal) government by presence of black nationalists and Malcolm X
- **negative radical flank effect** - activity of radical part of movement spooks potential elite allies
 - e.g., U.S. peace/student movement (late 1960s and 1970s) dominated by (radical) Youth International Party ('Yippies', Abby Hoffman and Jerry Rubin) more than (moderate) Students for a Democratic

Radical flanks and (non/violent) tactics (Chenoweth and Stephan 2011)

Pay attention to the mechanisms that Prof. Chenoweth specifies in her brief explanation

Radical flanks and (non/violent) tactics (Chenoweth and Stephan 2011)

Pay attention to the mechanisms that Prof. Chenoweth specifies in her brief explanation

- nonviolent campaigns are better at eliciting broad and diverse support
- nonviolent campaigns create more defections among the opposition
- nonviolent campaigns have a broader set of tactics at their disposal
- nonviolent campaigns often maintain discipline even in the face of escalating oppression

Coalitions and movement outcomes (2015)

	Unified movement	Within-movement conflict	Radical flank effect
Open <i>political opportunity structure</i>	<i>Political success:</i> able to win political reforms from receptive elites	<i>Lack of political success:</i> may undermine movement mobilisation and prevent activists from achieving their political goals	<i>Political success:</i> Receptive elites willing to side with moderates against radicals ('positive radical flank effect'), making moderate reforms
		Within-movement conflict and radical flank effect	
Closed <i>political opportunity structure</i>	<i>Lack of political success:</i> unlikely to win political gains due to lack of political elite receptiveness	<i>Political success:</i> initially unreceptive elites persuaded to side with moderates against radicals ('positive radical flank effect')	

Coalitions between parties and movements

- A. S. Heinze and Weisskircher (2022)
 - research questions
 - types of party responses
 - findings
- further questions

A. S. Heinze and Weisskircher (2022) - RQ

How have German political parties responded to anti-

Corona street protests?

What do you recall from the height of the pandemic? How did parties (in Germany and elsewhere) respond to mobilisation?

Types of party responses

A. Heinze (2018) on party reactions to radical parties (somewhat compelled to react):

Disengage

1. ignore
2. legal restrictions
3. cordon sanitaire (blocking coalitions)
4. demonise
5. defuse
6. hold

Engage

7. adopt (co-opt) policies
8. collaborate (executive, legislative, electoral)
[national, regional, local – e.g., cooperation with AfD at lower levels]

Types of party responses

A. S. Heinze and Weisskircher (2022) on party responses to movements (not necessarily compelled to react):

- **dismissive**: ignore or disregard the movement
- **accommodative**: legitimate or even collaborate with the movement
- **adversarial**: oppose/challenge the movement

Heinze and Weisskricher (2022) - response options

Heinze and Weisskricher (2022) - response options

```
table_data_4 <- tribble(
  ~Level, ~Action, ~Description,
  "Formal level", "legal restrictions", "most exclusionary possibility: e.g., bans, force",
  "Formal level", "counterprotest", "parties can mobilise counterdemonstrations against p",
  "Formal level", "tolerate", "neutral acceptance of the right to protest, even for those",
  "Formal level", "cooperate", "act cooperatively with protest group; mobilise support ba",

  kable_styling(bootstrap_options = c("striped", "hover", "responsive"), font_size = 23)
  collapse_rows(columns = 1, valign = "top")
```

Level	Action	Description
Formal level	legal restrictions	most exclusionary possibility: e.g., bans, forced dissolution, event restrictions
	counterprotest	parties can mobilise counterdemonstrations against pariah protest
	tolerate	neutral acceptance of the right to protest, even for those that are regarded as pariahs; passive option
	cooperate	act cooperatively with protest group; mobilise support base
Substantive level	ignore	disregard, refuse to comment on protest
	demonise	portray the actor as extreme, dangerous, irrational, or beyond the pale
	defuse	downplay protest issue importance, shift public attention to other issue(s)
	debate	acknowledges the importance of an issue put forward by the protestors, with parties discussing different policy positions
	adopt	adopting positions from protest arena becomes attractive if party considers the issue particularly relevant for competition, hoping to gain electoral advantage

Heinze and Weisskriher (2022) - findings

Formal level - response to Querdenken

```
table_data_5 <- tribble(

Left	No	Yes	No	Yes	No
FDP	No	Yes	No	Yes	No
AfD	No	Yes	No	Yes	Yes

Further questions

what about movement responses/approaches to parties?

(is it as relevant? does it matter? movements are not as *empowered* as parties)

...

is the epitome of social movement 'success' becoming a party?

Any questions, concerns, feedback for this class?
